

MD SOLUTIONS CAN HELP YOU GET TRUE BUSINESS AND CLINICAL INTELLIGENCE FROM YOUR EHR AND PRACTICE MANAGEMENT SYSTEMS

Having learned the hard way that mere data extraction isn't enough, MD Solutions has developed MD Insight—a Business and Clinical Intelligence platform that is flexible enough to combine data from your EHR and your PM systems, but simple enough to actually use. Too many of today's so-called experts in implementing practice applications know a lot about IT, but fall a bit short when it comes to reporting actionable information.

MD Solutions combines a significant knowledge of ambulatory EHR and PM systems and processes with proven Microsoft technology to gather, analyze and create actionable information about your practice. At MD Solutions, our consultants can help you tap into the full potential of your Allscripts investment—delivering as an end-product meaningful insights that can truly improve clinical and business decision-making.

THE POWER OF HAVING ALL THE FACTS AT YOUR COMMAND

With MD Insight you will realize significant benefits such as:

- Review disease management trends (i.e. which regiments are truly helpful in managing a disease)
- Does volume and diagnosis mix justify a capital purchase
- Reporting necessary to manage quality beyond PQRI

PROVEN TECHNOLOGY

MD Insight is based on industry leading Microsoft technologies—Microsoft SQL and Microsoft SharePoint. These tools allow for the kind of integration and data transformation that is necessary to connect a variety of disparate systems into actionable decision-making information.

Find out how an integrated practice centric view using data from a variety of systems can offer new insights into your practice's financial health and your patients' well being.
